

Power lines will not contain the RF, even at low levels. This has been proven to cause interference sufficient to prohibit communication in the Amateur Radio HF bands. Please don't let a for-profit industry destroy a volunteer public service. When a hurricane or tornado blows down the Broadband over Power Lines, your volunteer communication will be gone. If our amateur radio equipment is useless to us while BPL is up and running, you can bet we won't be as ready to help when you need us! Thank you for listening. KN4QB
